ANNEX II

Context of the Project

Library of the XXI Century: challenges and perspectives

Introduction

The goal of the project is to contribute to the improvement of quality of services provided by Brazilian libraries, especially by the Library of for Institute Applied Economic Research (IPEA), through the dissemination and national and international knowledge exchange on key trends and applications in the world context of Library and Information Science.

Therefore, the project proposal is to offer cutting-edge knowledge to Brazilian professionals, focusing on topics such as the future library, digital era, digitization, preservation and digital curatorship, information technology, innovation, electronic books, modernization, professional information, libraries of research centers, knowledge management, supporting culture, social media, institutional memory, open information access, information services, mobile media and networks of libraries.

Is expected to achieve the objective through lectures with the participation of national and international experts. In addition, these experts also share workshop with employees of IPEA Library, to discuss the main themes of the project. Finally, the production of the book with international academic standard is expected, covering, in principle, the following aspects related to the twenty-first century library:

- i. Future library: what is expected?
- ii. Library beyond the book
- iii. The profile of contemporary libraries
- iv. The new skills of the information professional
- v. The role of research centers libraries
- vi. Librarian participation in the management of institutional knowledge
- vii. Reference services for the XXI century libraries
- viii. Innovation in libraries
- ix. ICT and libraries: reality and perspectives
- x. Digitization, preservation and digital curatorship
- xi. Libraries, institutional memory and open access information
- xii. Libraries and eBooks

xiii. Library networks

xiv. Libraries and social media

xv. The use of mobile media in libraries

Justification

The Institute for Applied Economic Research (IPEA) has as its institutional mission to provide technical and institutional support for government actions to the formulation and reformulation of public policies and programs for Brazilian development. Therefore, every year, IPEA publishes a wide range of studies and applied research, supporting the development of plans, policies and government programs, assisting decision-making processes of government institutions, contributing to the expansion of the government's ability to act and cooperating with governments and international organizations in their field of activity. This process is made in coordination with society, involving economic networks, and social policies throughout the country and also abroad.

In order to monitor the development of advanced IPEA, its Library participates in a broad modernization project and prepares to bring innovative services to its users, which includes the provision of remote electronic access to important works in its collection that have been exhausted and / or of which there is only paper copies or who are in situations of high risk of data loss information, change the current software library management, signing a lot of electronic books, change the physical infrastructure, improvement of the reference and circulation services, modernization of the system of legislation, among others.

Despite the efforts performed by the Library staff, however, was evident the absence of models of modern libraries in Brazil that could be used by them as parameter and the lack of national and international literature able to offer a substantial foundation on building a library an essentially modern federal public agency as well.

For this reason, the preparation of a book with specific topics on which most modern and current on aspects of Library and Information Science, and the shared experience by the experts in the field, through lectures and workshop will offer important information to guide the work provided by IPEA Library and other Brazilian institutions and, thereby contributing to the advancement of availability, dissemination and country information access.
